WILLS'S CIGARETTES

Titan Crane.

The two principal types of Crane used for harbour construction are the "Goliath," or Gantry Crane, and the "Titan" Crane. The great advantage of the latter type is that, by means of its wheeled base running on rails, it can be withdrawn out of reach of the waves when not in use. Some of these "Titans" have an "overhang" of 100 feet, and can lift a load up to 50 tons.
